GDP: Preliminary Estimate for 2017Q2 and Outlook for 2017-18

August 18, 2017 According to the preliminary estimate, Taiwan's real gross domestic product (GDP) increased by 2.13% in 2017Q2, compared to the same period of the previous year (yo^y), and the revised estimate of real GDP grew by 2.66% (yo^y) in Q1. The real GDP is predicted to grow 2.11% and 2.27% in 2017 and 2018, respectively.

Preliminary Estimate of Real GDP in 2017Q2

In 2017Q2, the real GDP increased 0.47%, compared with the previous quarter on seasonally-adjusted annualized basis(saar), and grew by 2.13% on a year-on-year basis(yo^y), 0.03 percentage point higher than the advance estimate.

Meanwhile, the economic growth rate of 2017Q1 has been revised to 2.66% (formerly 2.60%).

On the demand side, real private final consumption grew by 2.05%(yo^y) in 2017Q2, mainly reflected the increase of consumption on financial transactions and foreign travels.

Real gross capital formation expanded by 0.17%(yo^y), a pullback from 8.13% in the previous quarter, mainly due to the sharp decline in machinery and transport equipment investment.

Meanwhile, real exports of goods and services grew by 4.97%(yo^y), mainly driven by the foreign demand for parts of electronic product, basic metals and machinery. Imports also increased by 4.37%(yo^y).

On the production side, the manufacturing sector grew by 3.81%(yo^y) in 2017Q2, following the 6.82% increase in the previous quarter, mainly due to the surge in output of semiconductor and machinery-and-equipment.

The wholesale & retail trade sector and the transportation & storage sector increased by 2.95% and 3.18%(both yo^y) respectively, after the expansion of 3.58% and 7.02% growth in the previous quarter.

Forecast for 2017

The global economy is expected to pickup modestly, supported by the sustained recovery both in the advanced economies and emerging markets. However, the pace of monetary policy normalizing in major countries and geopolitical conflict issues will likely add downside risks for the world economy.

Benefiting from the recovering global demand, particularly demand for electronic

products and new technological applications, such as internet of things (IOT), automotive electronics, and artificial intelligence, are expected to support the momentum of Taiwan's goods exports. It's projected that the real exports of goods and services will grow by 4.02% in 2017.

Real private fixed capital formation is expected to grow by 2.13%, attributing to the continuing investment of semiconductor manufacturing and government's promotions on business investments and innovations.

Real private consumption, supported by the accelerated economic growth, improving labor market and the vibrant stock market performances, might be damped by the weaken real wage growth. It is expected to grow by 1.89%.

For the whole 2017, the projected economic growth is 2.11%, 0.06 percentage point higher than the previous forecast released in May. And CPI for 2017 is expected to increase 0.66%, lower by 0.29 percentage point, mainly reflecting the moderated global crude oil prices and stable weather.

Outlook for 2018

The world economy is expected to continue growing at a modest pace for 2018, which helps to sustain Taiwan's export growth. Combining the contribution from domestic sector, real GDP will grow by 2.27% in 2018. CPI will gently rise by 0.87%.

Note : 1. Contributions of component X on s season at t year = $\{P_{X,t-1}/P_{GDGt-1} \times (rX_{t,s} - rX_{t-1,s})/rGDG_{t-1,s} + (rX_{t-1,s}/rGDG_{t-1,s} - rX_t/rGDG_{t-1}) \times (P_{X,t-1}/P_{GDGt-1} - P_{X,t}/P_{GDGt-2})\} \times 100\%$, where rX : Chained dollar of component X ; rGDP : real GDP(reference year = 2011) ; Px : Deflators of component X ; P_{GDP} : Deflators of GDP.

2. (1) Real Estate and Ownership of Dwellings consists of real estate development, operation, related activities and dwellings services. The dwellings services (including those rental and owner-occupied imputed) accounted for about 80% of total real estate and dwellings services.

(2) Include accommodation and food services, professional, scientific and technical services, support services, education, human health and social work services, arts, entertainment and recreation, other services, import duties and value-added tax.

- Note : 1. Numbers in quotation are working hour increased/decreased or percentage.
 2. Total monthly earnings of all employees are the total of regular (basic salary, monthly bonus, fixed subsidy and good attendance reward) and irregular (over-time, annual bonus, flexible bonus not paid by month) earnings of employees on payroll, but exclude the non-working reward such as insurance and pension.
 3. Number of employees at the end of this month = Number of employees at the end of last month + Number of accession in this month - Number of separation in this month. However, the formula above does not apply on annual average data since the annual employees number is mean of a year not the number at the end of a year.
 4. Both Industry & Services and Services Sectors statistics covered Education Industry (only other education and educational support activities are included) since January 2009.

Explanation : 1. Per capita income is calculated as the ratio of per capita income of first quintile to per capita income of fifth quintile. All the population ranked in ascending order of per capita income is divided in to five quintiles. Per capita income is calculated as household income divided by household size(or the square root of household size) .
 2. The figures of income inequality measured by per capita income is lower than per household income.

Table 14 The Change of Disposable Income per Household Occurred by Current Transfers between Households and Government

Unit:NT\$,%

Year	Household Income Without Current Transfer From Government			Household Current Transfer Income From Government		Household Income Including Current Tranfer Income From Government			Household With Current Transfers Income to Government		Disposable Income			Ratio Difference		
	Amount (1)		Ratio A	Amount (2)		Amount (3)=(1)+(2)		Ratio B	Amount (4)		Amount (3)-(4)		Ratio C	With Current Transfer From Government	With Current Transfers to Government	With Current Transfers

Explanation: The higher Gini's concentration coefficient, the more serious the inequality of income distribution.

Note: The data presents official releases of above countries. The comparison should be made cautiously for the difference of income definition. For example, Taiwan is disposable income from all households. U.S. (a) is income from all households after accounting for government cash benefits and taxes , the year of 2007 and before is including capital gains and non-cash transfers, the years of 2008 and 2009 is excluding capital gains. U.S. (b) is income before tax including government cash transfers, but excluding capital gains and non-cash transfers. Japan (a) is yearly income(before tax), and not incorporated with farm households till 1999, not with single households till 2002, Japan (b) is per capita disposable income for all households. South Korea (a) is per capita disposable income for the urban area households (1-person households and farm households are excluded),South Korea(b) is per capita disposable income for all households. Singapore(a) for all households, Singapore(b) and (c) for employed households, all including income from work, (a) and (b) are before accounting for government benefits and taxes, hence having higher ratios and coefficient, (c) is after that. The data of Hong Kong compute on post-tax household income and publish the report every five years.

Source: Japan: (a) Family income and expenditure survey, (b) National Survey of Family Income and Expenditure. South Korea: Annual Report on the Household Income and Expenditure Survey. U.S.: is from Current Population Survey Annual Social and Economic Supplements(CPS ASEC), (a) "Effects of Taxes and Transfers on Income and Poverty", (b) "Income, Poverty, and Health Insurance Coverage in the United States" Singapore: (a) General Household Survey, (b)(c) Data for the year of 2000 and 2010 is from the Census of Population; for the year of 2005 is from General Household Survey; for the year of 2001,2002,2003,2004,2006,2007,2008,2009,2011,2012,2013,2014,2015 and 2016 is from Labour Force Survey. Hong Kong: 2016 Population By-census, Thematic Report: Household Income Distribution in HK.

Explanation : pin ≈ 3.31 square meters.

Note : ①Concerning ownership of the house, before 2010, the term "self-owned" means owned by household members and their lineal relatives. In 2010, the meaning is amended to owned by household members who usually live in this house in accordance with the definition of 2011 Population and Housing Census.

Table 17 Government Social Transfers In Kind Effect on Income Distribution, by Income Quintile

Year	Disposable income			Government social transfers in kind			Household income after government social transfers in kind			Government social transfers in kind effect A-B
